PROFILE

AI & Machine Learning Engineer with experience in computer vision and data processing. Currently at Airbus, I design and evaluate analysis methods applied to vision models in an aeronautical environment. I aim to contribute to the development of industrial Data/AI solutions, from data preparation to model integration and deployment.

EDUCATION

Master's in Artificial Intelligence

University of Caen Normandy

Sept. 2024 – Sept. 2026

Caen, France

- Expected graduation in September 2026.

Bachelor's in Computer Science

University of Clermont Auvergne

Sept. 2021 – May 2024

Clermont-Ferrand, France

SKILLS

- **Computer Vision:** YOLO, object detection, pose estimation, tracking (ByteTrack).
- **Machine Learning:** Transfer learning, classification, clustering, PCA, SVM.
- **NLP:** Transformers, CamemBERT, token classification, embeddings.
- **Explainable AI (XAI):** Attribution methods, concept-based explanations.
- **Frameworks & Libraries:** PyTorch, TensorFlow/Keras, scikit-learn, Hugging Face, OpenCV, Pandas, NumPy.
- **Data & Cloud:** PostgreSQL, MongoDB, Talend, Apache Hop, AWS (EC2, S3).
- **Languages & Tools:** Python, Java, JavaScript, Git, Docker, Linux.

PROFESSIONAL EXPERIENCE

Airbus SAS

Artificial Intelligence and XAI Intern

March 2026 – Sept. 2026

Toulouse, France

- Analysis and evaluation of the behavior of a YOLO detection and pose estimation model applied to runway localization.
- Implementation of concept-based explanations to identify representations learned by the model and localize them within images.
- Design of reproducible protocols in Python/PyTorch on AWS to measure the stability and fidelity of explanations, and analyze their evolution under varying observation conditions.

Responsibio

Data Science Intern

May 2025 – Aug. 2025

Caen, France

- Development of an animal vocalization classification pipeline for biomonitoring, using spectral representations and transfer learning.
- Data preparation and comparison of neural networks with an SVM-PCA approach to evaluate the performance of different methods.

PROJECTS

Automatic Annotation of Clinical Narratives

Python, PyTorch, Hugging Face Transformers, CamemBERT, Pandas

Sept. 2025 – March 2026

- Development of an NLP system that automatically identifies, word by word, instances of episodic and semantic memory in French clinical narratives.
- Fine-tuning and comparison of CamemBERT, ModernCamemBERT, and DeBERTa, with patient-level cross-validation to measure generalization without data leakage.

Containerized Data Visualization Application

Docker, Node.js, GraphQL, MongoDB, D3.js, JavaScript

March 2025 – May 2025

- Built a web application to explore sales data using interactive charts and maps in D3.js, powered by a GraphQL API and MongoDB.
- Containerization and orchestration of the frontend, API, database, and its administration tool using Docker Compose.

ADDITIONAL INFORMATION

Languages: Albanian (Native), French (C2), English (C2)

Interests: Football, travel, cultural discovery
