📍 France 🌐 Eldis Ymeraj 🔄 elymeraj 📁 Portfolio

Data Scientist specialized in AI, with a particular interest in Computer Vision and Natural Language Processing. I am currently completing my final-year internship at Airbus, where I work on the explainability of vision models applied to landing assistance systems. I am seeking a permanent or fixed-term position to contribute to practical AI projects and develop robust, reliable, and interpretable solutions.

TECHNICAL SKILLS

Programming: Python, SQL, Java, C/C++

Data Analysis: NumPy, Pandas

Machine Learning & Deep Learning: Scikit-learn, PyTorch, TensorFlow/Keras, SVM, GMM, clustering, boosting, CNN, GAN, fine-tuning

Computer Vision: OpenCV, YOLOv8 Pose, YOLO-NAS Pose, ByteTrack

Explainable AI - XAI: Xplique, CRAFT, attribution methods, concept-based methods

Natural Language Processing - NLP: NLTK, spaCy, FastText, WordNet, Hugging Face Transformers, BERT, CamemBERT, embeddings

Databases: PostgreSQL, MySQL, MongoDB, SQLite

ETL & Business Intelligence: Talend, Apache Hop, OLAP, MDX

Web, APIs & Visualization: FastAPI, GraphQL, D3.js

Cloud: AWS EC2, Amazon S3

Optimization: CPLEX

Tools & Environments: Git/GitHub, Docker, Jupyter, Linux, LaTeX

SOFT SKILLS

Rigor, Curiosity, Communication, Teamwork

LANGUAGES

French: C2, **English:** C1, **Albanian:** Native

INTERESTS

Football, Travel and cultural discovery

PROFESSIONAL EXPERIENCE

Airbus SAS

Data Science / Explainable AI Intern

03/2026 – 09/2026 | Toulouse, France

- Contributed to the RELAI project, focusing on the explainability of runway detection models for vision-based landing assistance systems.
- Adapted CRAFT, a concept-based explainability method, to YOLOv8 Pose and YOLO-NAS Pose models to identify and visualize learned concepts.
- Evaluated the fidelity and robustness of explanations across model layers, datasets, and experimental settings.

Tools: Python, PyTorch, YOLOv8 Pose, YOLO-NAS Pose, Xplique, CRAFT, NumPy, Pandas, Matplotlib, AWS EC2, Amazon S3, Git

Responsibio

Data Science Intern

05/2025 – 08/2025 | Caen, France

- Designed an AI-based biosurveillance system for animal behavior analysis.
- Implemented a signal processing and deep learning pipeline by generating spectral representations used for transfer learning.
- Developed an SVM classifier optimized using PCA.

Tools: Python, PyTorch, Librosa, Scikit-learn, NumPy, Pandas, Git

PROJECTS

Automated Annotation of Clinical Narratives

09/2025 – 03/2026

- Developed an NLP pipeline for the word-level annotation of patients' autobiographical narratives to distinguish episodic and semantic details.
- Prepared the corpus, performed BIO tagging, and trained a CamemBERT model for sequence labeling.

Tools: Python, PyTorch, Hugging Face Transformers (CamemBERT), Pandas, Excel, Git

Data Visualization Application

03/2025 – 05/2025

- Developed a multi-container application to query and explore sales data through a GraphQL API and interactive visualizations.

Tools: Docker, Node.js, GraphQL, MongoDB, D3.js, HTML, JavaScript

[View all my projects on GitHub](#)

EDUCATION

Master's Degree in Artificial Intelligence

University of Caen Normandy, Caen, France

09/2024 – 09/2026

- Supervised and unsupervised learning, deep learning, NLP, computer vision, data mining, ETL with Talend and Apache Hop, and SQL/NoSQL databases.

Bachelor's Degree in Computer Science

Clermont Auvergne University, Clermont-Ferrand, France

09/2021 – 05/2024

Database management systems, artificial intelligence, applied mathematics, linear programming, advanced algorithms, probability and statistics, and operations research.
